## **International Conference on Lead & Lead Batteries–Road Map for India 22 & 23 Oct 2018, New Delhi**

### **Introduction**

Globally, the lead acid battery, both the product as well as the industry, is facing some new challenges, ever since the Paris Round on Climate Change in Dec 2015. In the past also Lead Batteries encountered similar threats but eventually, the good old Lead Acid Battery emerged victorious and it has been riding the demand wave successfully. During the last several years, both the lead acid battery manufacture as well as lead battery recycling have been continuously growing worldwide.

In India the various Supreme Court judgments for alternate-fuelled vehicles, to control urban transport pollution loads in cities, has pushed the policy planners as well as the battery units and automobile manufacturers to think of lithium ion batteries, though India has neither the lithium resources nor manufacturing capability for Li-ion batteries. This would be only a limited threat, as India by and large is a price-sensitive market and the population has a very rich, satisfying experience, all these decades, in using the economically affordable lead acid batteries in diverse applications.

In order to take stock of the current situation and to prepare for the future by arriving at meaningful recommendations, short term as well as long term, India Lead Zinc Development Assn (ILZDA) & its affiliate Lead Battery Society of India will be holding an “**International Conference on Lead & Lead Batteries–Road Map for India**” during 22 & 23 Oct 2018 (Monday & Tuesday) at New Delhi
